DETAILED ACTION

Claims 1-20 are pending in the present application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a method for producing a nucleic acid polymer, classified in class 435, subclass 91.4.
- II. Claims 15-20, drawn to a method for producing a recombinant eukaryotic host cell, classified in class 435, subclass 455.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of Groups I and II comprise steps which are not required for or present in the methods of the other groups. For instant the method of Group II requires the transformation of a eukaryotic host cell which is not required in the method of Group I. Thus, the operation, function and effects of these different methods are different and distinct from each other. Moreover, the end results of each of these methods differ. Therefore, the inventions of these different, distinct groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Also, the search required for Group I is not required for Group II such that restriction for examination purposes is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Konstantina Katcheves whose telephone number is (703) 305-1999. The examiner can normally be reached on Monday through Friday 7:30 to 4:30.
